

India built  
**UPI.**

Two things still  
**cost you.**

A rent you don't see — and a fraud no faster rail can stop.

# A middleman still takes a cut of every payment —

even though the money can move bank-to-bank, with no aggregator in the path.

UPI already proves it. We just haven't finished the job.

# The scam isn't hacking your **account.**

It's talking YOU into paying. A faster rail does nothing to stop that.

This is now the fastest-growing financial crime in the country.

## WHY YOU FALL FOR IT

**You knew better.  
Your brain just  
didn't get the memo.**

A scam triggers panic. Panic shuts down judgment. In that state you literally can't reach what you already know.

"Don't hang up. Don't tell anyone. Do it now." — one voice, no second opinion.

THE ONE MOMENT

**Every scam ends  
at the same click:  
you authorising  
the payment.**

You can't stop the call. You CAN intervene at that one click  
— for two seconds.

## WHY ADS FAIL

**A "beware of fraud"  
banner on every  
screen becomes  
wallpaper.**

**Warnings must be rare, specific, and earned by real risk — or they're worse than nothing.**

Which means you need shared intelligence to know when to fire.

# The Aware Layer

The screen becomes the second voice in the room.

- 1 A cooling countdown that breaks the scammer's urgency
- 2 "Is someone on the phone telling you to pay right now?"
- 3 "This matches a digital-arrest scam" — named, not vague
- 4 "This account: 9 fraud reports in 24h" at the confirm screen

# A Fraud Intelligence Consortium

Fraud is a network crime fought by isolated banks. Each sees one sliver; the criminal sees the whole map.

Pool the signal (not the data). Flag a mule at one bank — every bank knows in seconds.

Make the bank that hosts a mule share the loss. Then sharing becomes self-interest.

## WHO GAINS

# Almost everyone.

### Merchants

flat near-zero cost, not a percentage

### Banks

own the rail + the revenue middlemen take today

### Government

lower subsidy, sovereignty, protected citizens

### You

lower prices and far less chance of being scammed

## THE ASK

**India built the  
hardest 80%.**

**Let's finish it —  
together.**

A pre-competitive working group: RBI, NPCI, CERSAI, banks, cybercrime (1930), fintechs and researchers.

Pilot the fraud win first. Then remove the toll-booth.

**If this makes  
sense to you —**

Comment. Repost. Tag the one person who should  
be in the room.

**BHARAT DIRECT · a discussion starter, not a pitch for sale**
